SOME DECISIONS ARE TOUGH. THIS ONE ISN'T.

When you consider a Comfort-Aire® system, quality and value are a given. You're getting peace of mind with great features and a smart design.

Efficiency ratings

A high-efficiency system means lower energy bills for you. Efficiency is measured in a number of different ways:

- **Seasonal Energy Efficiency Ratio (SEER2)** is a measurement of the efficiency of cooling products. The higher the SEER2, the greater the efficiency.
- **Heating Seasonal Performance Factor (HSPF2)** is a measurement of a heat pump's heating efficiency. The higher the HSPF2, the more efficient the heat pump's performance.
- **Annual Fuel Utilization Efficiency (AFUE)** is shown as a percentage and relates to natural gas usage. An AFUE of 90% means that 90% of the fuel was turned into actual heat energy, while only 10% was lost.

Immediate savings

With a high-efficiency system, you may qualify for local utility and energy incentives as well as rebates.† Your **Comfort-Aire®** professional can provide you with the latest information so you can take full advantage of available money-saving opportunities.

Is it time to replace your unit?

It can be hard to decide whether to repair or replace. Here are a few things to keep in mind when you're deciding:

- **Age of the unit –** You might want to consider a new unit if your HVAC system is 10-12 years old.
- **Updates –** New technology makes units more efficient and easier to control. Plus, older units use discontinued refrigerant that's scarce and expensive to recharge.
- **Repair costs –** Once repair costs exceed 50% of the cost of a new unit, a new purchase might be in order.

† Check with your local utilities to confirm eligibility. Rebates and incentives for efficiency vary by locality and utility. Comfort-Aire does not make any representation, warranty, guarantee, or other assurance as to whether the each model qualifies or is eligible for rebates in your local area.

WHATEVER YOUR NEEDS, A COMFORT-AIRE® PACKAGED UNIT IS THE RIGHT CHOICE.

AIR CONDITIONING AND HEAT PUMP MODELS

The **APA-S1A** electric air conditioner is ideal if you have all-electric heating and cooling in your home. If you live in an area that experiences consistently mild temperatures, the **HPA-S1A** heat pump is a perfect solution for both heating and cooling. Both units are ruggedly designed and can withstand every kind of weather, providing dependable and efficient operation season after season. You also get the added efficiency of an ECM motor in both units.

GAS-ELECTRIC MODELS

If your home has a natural gas connection, the compact and durable **GPA-S1A** gas/electric packaged unit could be the right choice for you. Engineered with quality materials and built to last, the **GPA-S1A** has a minimum efficiency rating of 13.4 SEER2, offering consistent energy-savings and reliable heating and cooling throughout the year. You also get the added efficiency of an ECM motor in this unit.

ULTRA LOW NOX MODELS

The **GPA-SX1A** meets the Ultra-Low Nitrogen Oxides Standards of California. If your home has a natural gas connection, the compact and durable **GPA-SX1A** gas/electric packaged unit could be the right choice for you. Engineered with quality materials and built to last, the **GPA-SX1A** has a minimum efficiency rating of 13.4 SEER2, offering consistent energy-savings and reliable heating and cooling throughout the year. You also get the added efficiency of an ECM motor in this unit.

MAKE THE COMFORT-AIRE® DECISION YOU WON'T REGRET.

When you think about everything **Comfort-Aire®** delivers, your decision is easy. With **Comfort-Aire®**, all your heating and cooling questions are answered. The performance and reliability you want are right here, and ready to go to work.

Comfort-Aire®. It's the right choice.

"This product complies with all California product labeling laws including, but not limited to, the Safe Drinking Water and Toxic Enforcement Act of 1986, more commonly known as Proposition 65."

Due to ongoing product improvements, specifications and dimensions are subject to change and correction without notice or incurring obligations. Determining the application and suitability for use of any product is the responsibility of the installer. Additionally, the installer is responsible for verifying dimensional data on the actual product prior to beginning any installation preparations.
Third party incentive and rebate programs have precise requirements as to product performance and certification. All products meet applicable regulations in effect on date of manufacture; however, certifications are not necessarily granted for the life of a product. Therefore, it is the responsibility of the applicant to determine whether a specific model qualifies for these incentive/rebate programs.
